network
hardware & service

pc & server support

managed services

strategic consulting
and projects

flexible solutions for your business needs

firewall hardware & service

The edge security device provides CUs security rules and edge network protection, web filtering, and web usage reporting.

A managed firewall is provided for each location. There is no need for the credit union to purchase or update equipment since its part of the service.

network hardware & service

This provide credit unions with a high speed local network and insight into network traffic to make sure the network traffic is healthy and allowing the CU to serve their members.

Managed network switch provided as part of the service!

pc & server endpoint protection

(license & service)

Anti-virus, malware, and end point protection such as disabled USB drives is a key security service for credit unions. We provide the license, management, and reporting to help secure your environment.

pc & server patching

(license & service)

Patching PC and servers helps keep information safe and protects from vulnerabilities and 'hacker' exploits. We also provide reports so CU leadership and NCUA examiners know that systems are being patches.

pc & server backup

(license & offsite storage)

Backups are a critical part of ensuring you don't lose data from security incidents or technology failures. Our backups cover documents on PCs and files on servers with off-site transfers to ensure that data is available to retrieve if and when it is needed.

managed service desk

All of the services provided come with our helpdesk staff how monitor for alerts, help make changes as needed, and provide you prompt business hour support if you have any questions or need assistance with our services.

"I could have never done this work without Pure IT. We would have never been able to afford the caliber of people that Pure IT brought in to resolve these issues."

Becky Reed, CEO Lonestar Credit Union

additional services

One size does not fit all for small credit unions. As a partner, we are an extension of your staff. Our customized approach offers services and support to credit unions at many sizes and with a wide-range of needs.

pc helpdesk

Our Service Desk can help with software and services beyond the foundational IT services, such as Microsoft programs & end-user questions

local tech response

We have a network of IT staff around the country who can respond to local needs next business day

scoped tech projects

We can help with small or larger technology projects such as pc replacements, internet switch, application deployment

strategic it advisor

Trusted advice from a technology and CU perspective; software/hardware rfp or tech planning sessions

Pure IT Credit Union Services provides strategic IT consulting, assessments, and managed services for credit unions looking to elevate technology to enable their organization and gain a competitive edge. Comprised of a team of experienced architects and consultants, Pure IT is a trusted partner that provides clear documentation and strategy roadmaps to better position credit unions to serve their members and ongoing support at the level the credit union needs.

Our approach has proven to transform traditional IT Cost Centers into strategic enablers that are ready for change, growth, and sustainability.
